OCEANA Glass Vessel Recommended Specification

- Place a rubber washer (optional) between vessel and the countertop as a buffer
- Apply plumber's putty under rim of drain and place into sink. Cut hole in countertop the same size as the drain. Drain will go through vessel and hole in countertop.
- Tighten drain underneath. If drain does not have enough threads to tighten completely up to countertop, purchase a piece of PVC pipe to make up the difference.
- PVC pipe can also be used if you purchase a drain with an overflow hole. Place a rubber washer above and below the PVC pipe and apply plumbers putty to prevent leakage.
- Clear caulking or epoxy can also be applied between the vessel and the countertop for added support.
